PROFESSIONAL SUMMARY

Results-driven Aerospace & Defence Manufacturing Engineer with 4+ years of experience in electrical wiring harness manufacturing, EMS design, and process engineering. Proven track record in NPI/NPD, MES operation management, quality systems (FMEA, FAI, 8D, 7QC), and lean manufacturing. Experienced in cross-functional collaboration, team leadership, and delivering operational excellence in regulated aerospace environments (Airbus, Boeing).

CORE COMPETENCIES

Aerospace Wiring Harness Manufacturing • MES (Manufacturing Execution System) • NPI & NPD • FMEA • FAI (First Article Inspection) • 5S & Kaizen • Lean Six Sigma • 7QC Tools • 8D Analysis • QRQC • SOP Creation • AutoCAD 2D • MS Office • MATLAB Fundamentals • People & Time Management

CERTIFICATIONS & TRAINING

- Lean Six Sigma – Yellow Belt
- Simulink Onramp – MathWorks
- MATLAB Onramp – MathWorks
- PLC Training – Central Institute of Tool Design (CITD), Hyderabad

WORK EXPERIENCE

Lead Analysis | [HCLTech](#) April 2026 – Present

- Undergoing structured training and knowledge transition in aerospace manufacturing processes and digital manufacturing systems.

PED Engineer | [Samvardhana Motherson Adsys Tech Limited \(SMAST\)](#) Sep 2025 – Mar 2026

- Created and followed Standard Operating Procedures (SOPs) for aerospace wiring harness manufacturing to maintain process consistency and meet industry standards.
- Managed operation sequencing and process mapping in MES for wire harness manufacturing, ensuring accurate production flow and alignment with process requirements.
- Prepared and handled Requests for Quotation (RFQs) and process time for harness parts and tools to support cost-effective purchasing and lead time.
- Examined and verified FA drawings to make sure harness connections and layouts complied with design and quality specifications.
- Prepared and checked electrical testing codes and procedures to ensure harness quality, performance, and compliance with aerospace requirements.

Engineer | [Makercubs Technologies Pvt. Ltd.](#) April 2024 – Aug 2025

- Engaged in Printed Circuit Board (PCB) designing, assembly, and testing, contributing to infrastructure design.
- Developing & implementing new products (NPD & NPI).
- Creating Standard Operation Procedures (SOP), visual aids.
- Designed and developed new circuits and prototypes, supporting functional interface synthesis.
- Hands-on experiences with DIY toys and manufacturing.
- Warehouse management for incoming materials, storage & outgoing finished products.
- To create the bill of materials for our new product, we gathered all the required parts, defined their quantities, and documented them with item codes and detailed descriptions in a structured format.
- Collaborated with vendors to optimize design-to-manufacturing workflow, improving efficiency.
- Conducted safety and quality testing in compliance with IS 15644 and IS 9873 standards.

Team Leader & Technical Operator | Safran Electrical & Power India Pvt. Ltd.*Aug 2018 – Sep 2021*

- Manufactured electrical wiring harnesses for Airbus and Boeing aircraft platforms in accordance with customer and internal quality requirements.
- Led a production team, assigning daily tasks based on skill sets, monitoring output, and maintaining OTD (On-Time Delivery) and KPI targets.
- Participated in a critical green-field technical transfer project from France and Morocco to India, ensuring smooth process migration.
- Applied lean methodologies, Kaizen, and 5S practices to improve productivity, safety, and product quality.
- Identified and reported non-conformances via QRAP (Quick Response Action Plan), utilizing 7QC Tools and 8D analysis to resolve quality issues.
- Collaborated with cross-functional teams (CFT) on First Article Inspections (FAI), ensuring precise system mapping and verification.
- Mentored and trained team members on technical specifications, fostering a culture of continuous improvement and operational excellence.
- Coordinated with the calibration team to perform timely validation of production tools and equipment.

CONTINUOUS IMPROVEMENTS & INNOVATIONS

- Implemented Poka-Yoke tooling for in-process inspection, reducing defect escape rates.
- Implemented Electrical testing procedure & equipment to ensure the quality of the products.
- Conducted material usage analysis as part of waste reduction initiatives; redeployed excess wires from one product to another, reducing scrap.
- Identified alternative components with equivalent specifications, reducing overall product cost without compromising quality.
- Introduced pre-inspection of Potentiometers prior to assembly, preventing full product scrap due to component failures.

CLIENT & PROGRAM EXPOSURE

Aerospace Programs

Boeing & Airbus – LEAP engine harness project

FACC– Boeing & Airbus structural harness project

EDUCATION

B.Tech – Electrical & Electronics Engineering 73.8%

Anurag University, Hyderabad | 2021 – 2024

Diploma – Electrical & Electronics Engineering 73.3%

TKR Engineering College, Hyderabad | 2015 – 2018

LANGUAGES

- English
- Telugu
